In the past few years, pursuing progress in forensics has seemed to focus more on pursuing trophies -- often at the expense of the published rules and often at the expense of the more challenging events. Directors of Forensics have discussed this among themselves, but never placed it in a public forum. This panel will discuss these changes, how they fit with the rhetorical roots of the events and whether these changes really represent progress. Finally, the panel will pursue progress toward a consensus on some solutions.

Popular media present a representation of reality that to some extent forms the basis for audiences’ view of the world. This panel addresses media coverage of specific events such as Jessica McClure’s ordeal and more general concerns about news media bias. Media representation of race is addressed in other studies that examine such issues as the portrayal of African-Americans in televised football games and mixed race characters in Hollywood films.

“A ‘Revamped’ Neo-Aristotelian Approach to Martin Luther King’s Morehouse Commencement Address and His Educational Lesson”
Debut Papers on Civil Rights rhetors revolves around undergraduate essays dealing with ethical, racial, and moral public communication. In their studies of public addresses leaders of the civil rights movement, the authors apply rhetorical and critical methods to differing types of discourse. While traditional or neo-Aristotelian principles are employed in their analyses, the results of their studies show interesting readings when placed in a contemporary setting. As the theme for the convention is “The Pursuit of Progress,” this panel makes a contribution to the study of communication methods. In particular, are the critical limitations of traditional criticism truly limiting when applied to minority discourse? As much as we may have “progressed” to multiple, contemporary approaches to rhetorical/critical analysis, the relevance of classical precepts is very much in force.

In any ethnographic study, when the scope of what constitutes the “field” is itself extended, the discussion inevitably leads as much to the accomplishments of the endeavor as it leads to an engagement with the contradictions,
dilemmas, and surprises. This panel offers insights into the process of “doing” ethnography and voices concerns about ethnographic practices.

SA 3.19 E-mail, E-newsletters, and Instant Messaging: What research says about Preferences, Competencies, Anxieties, and Best and Worst Practices
Increasingly, academic departments use email to stay in contact with students. This panel investigates media by which departments may reach, retain, and recruit students focusing on what information students want, what they do with that information, and how they rate the importance of that information. Communication competence and anxiety regarding email and instant messaging are addressed. As students increase their use of the web and email, understanding this audience and these media become even more crucial. Despite how competent individuals may be regarding email, mistakes do happen. The last paper details some of the disastrous mistakes made by individuals who should have known better.

Chris Sterling has been in academia for 35 years, and he has served on the George Washington University faculty since 1982. During his tenure there, he has filled the roles of Associate Dean of Graduate Studies and Director the Graduate Telecommunications Program. He has authored and edited 20 books and dozens of articles on a wide range of communication topics. Perhaps most prominent among his published works are Stay Tuned (coauthored with John Kittross), which is the most comprehensive single volume history of American broadcasting, and for many years he coauthored new editions of Broadcasting In America with noted scholar Sydney Head. Both books hold distinguished and important places in the canon of broadcast studies. Recently Sterling completed work on the three volume Encyclopedia Of Radio, which won the 2004 American Library Association's "RUSA" Award. He is the founding editor of Communication Booknotes Quarterly, and he was editor of the Journal Of Broadcasting from 1972 to 1976. His other editorial positions comprise a formidable list. In 2003, he was the recipient of the Stanton Fellowship Award presented annually by the International Radio and Television Society, and in 1992 he was recognized for his vast contribution to broadcast education with the Broadcast Education Association's Distinguished Education Service Award.

This roundtable discussion examines four theoretical and pedagogical perspectives offered by Caribbean scholars employing a postcolonial framework. As post-colonial
peoples, we still have to reckon with theories that are alien to our experiences, and methods that will never make sense of our complex realities. For us, culture is more than a variable; we believe that human beings are really embedded with complex historical and cultural webs of relations. We, therefore, question some of the biological and psychological based theories that abound in academe. Yet, academe’s ruling order demands that we try and do something constructive with its strange and simplistic theories and methods, and, in so doing, remain oblivious to the fact that they were never meant for us. As resistance comes with a high price in academe, we continue to burden ourselves with these theories and methods, trying desperately to get them, in one way or the other, to work for us. We rationalize about the need to survive before we can change the ruling order. But we continue to perish.
